

EQUIPMENT

UV LIGHT TRAP MINIATURE (MODEL 2503) AND MINIATURE MOSQUITO LIGHT TRAP (MODEL 2504)

are patterned after the light trap originally developed by the United States Center for Disease Control. They are constructed using heavy-duty, corrosion-resistant materials for durability and long life. The high-intensity incandescent or ultraviolet illumination provides maximum mosquito and sand fly attraction. Four-blade, high-flow fan provides excellent downdraft at speeds over 2500RPM with minimum energy use. Includes easy-to-program, four-function logic system with photocell control, quick-change catch jar and durable net with tie strings.

SOLO MISTER 451

has a new 66.5 cc engine with nickel/silicon carbide cylinder coating to generate a fan air volume of max. 824 cfm for total plant penetration. Increased engine performance converts to higher misting performance. With its 3 gallon chemical tank and large 0.5 gallon fuel tank and low fuel consumption it can be operated 80+ minutes before refueling. Starts easy and runs quiet with comfortable backpack carrying frame. It is an excellent choice for residential or large commercial barrier control treatments.

VERSA-FOGGER

The Versa-Fogger, is a gasoline powered backpack fogger specially designed for professional applicators to provide a wide range of flow rates and particle sizes, that are perfect for most all pest control applications. Features include an all metal frame, quiet Honda 4 Stroke motor [no mixing oil with gas] and a true compressor delivering air at high pressure. Flow rate is fully adjustable and is less than 27 lbs [dry weight].
